ABSTRACT

The report examines progress for school years 1980-81 and 1981-82 in implementing P.L. 94-142, The Education for All Handicapped Children Act. Following an executive summary, an analysis of three major aspects of the law's implementation is detailed. A section on progress toward a free appropriate public education cites data on the number of children served, personnel, the least restrictive environment requirement, and finance. Among conclusions are the continuing rise in the number of personnel responsible for serving handicapped children, consistency in the percentage of handicapped children served in regular schools (92%), and an average cost per handicapped child of 2.17 times that of the nonhandicapped child. The next section, on efforts to prevent erroneous classification, reports on the National Survey of Referral, Assessment, and Placement Practices and on activities of Special Education Programs (SEP). Among findings of the survey was referral rates for minority students roughly proportionate to their incidence at the elementary level but at a rate higher than their incidence at the secondary level. Other SEP activities to prevent erroneous classification included policy clarification, technical assistance, and support for personnel training. The final section covers SEP's administration of the Act and includes discussions of monitoring, complaint management, technical assistance to the states, and discretional programs. Monitoring activities continue to focus on strengthening state capacity to monitor local education agencies and public and private agencies. Complaints concerning implementation of the Act were handled by the Office of Civil Rights. Other emphases included shifting of technical assistance efforts from helping states implement procedural aspects of the Act to aid in improving the quality of special education programs. Discretional grant/contract programs administered by SEP focused on such areas as personnel preparation, education for the severely handicapped, and technology. Extensive appendixes include child count tables, personnel tables, least restrictive environment tables, and a financial table. (DB)

Foreword

This fifth Annual Report to the Congress on the Implementation of the Education of the Handicapped Act (EHA), as amended by P.L. 94-142, continues to examine the impact of the Act and its implementing regulations. With the experience of more than six years of administration of P.L. 94-142, the Department is in the process of reviewing the effects of the Act at the state and local level and the appropriate role for the federal government in the administration of the Act. These past years have seen a shift from the initial procedural activities to implement this legislation affecting all handicapped children to a strengthened concern for the quality and comprehensiveness of special education programs.

The Administration is committed to reviewing the role of the federal government in education and to adjusting that role to one of increased support for priorities which are determined by state and local educational agencies. Special Education Programs has been able to move toward a role of facilitation with the states by providing technical assistance for the solution of complex problems related to the delivery of special education and related services and the development of procedures to improve cooperation among a wide range of state-level agencies which can best provide those services.

The goals of the Act are being achieved. The data contained in this report show steady improvement in the provision of educational services to handicapped children. The federal goverment will continue in its efforts to assist the states in maintaining the gains achieved over the years since the passage of EHA and to improve the effectiveness of special education programs to assist all handicapped children in realizing their full potential.

Ed Sontag
Acting Director
Special Education Programs

Preface

Section 618(d)(1) of the Education of the Handicapped Act (EHA), as amended by P.L. 94-142, requires the Department of Education to submit an annual report to the Congress on the progress being made toward the provision of a free appropriate public education to all handicapped children. According to Section 618(d)(2) of the Act, each report is to provide a detailed description of all evaluation activities conducted to assure effective implementation of the Act, including:

> "(A) an analysis and evaluation of the effectiveness of procedures undertaken by each State educational agency, local educational agency, and intermediate educational unit to assure that handicapped children receive special education and related services in the least restrictive environment commensurate with their needs and to improve programs of instruction for handicapped children in day or residential facilities;
>
> (B) any recommendations for change in the provisions of this part, or any other Federal law providing support for the education of handicapped children; and
>
> (C) an evaluation of the effectiveness of the procedures undertaken by each such agency or unit to prevent erroneous classification of children as eligible to be counted under Section 611 [of EHA, Part B] including actions undertaken by the [Secretary] to carry out provisions of this Act relating to such erroneous classification."

Also required under Section 618 is programmatic information concerning the evaluation of programs and projects assisted under EHA and other federal programs supporting the education of handicapped children as well as implementation data from state and local educational agencies and other appropriate sources regarding numbers and types of handicapped children by state, environments in which they are served, and fiscal and human resources expended and employed to serve them.

This is the fifth annual report that has been prepared to provide the Congress with a continuing description of national experiences in making available a free appropriate public education for all handicapped children. The report provides an analysis of national statistics on numbers of children receiving special education and related services, numbers of school personnel available to provide such services, and numbers of handicapped children receiving special education in different educational environments. It also describes a national study on procedures to prevent the erroneous classification of handicapped children as well as activities undertaken by Special Education Programs to assist the states in implementing the provisions of the Act.

Executive Summary

The Education of the Handicapped Act (EHA), as amended by Public Law 94-142, requires the Secretary of Education to provide to the Congress an annual report on the progress being made toward the provision of a free appropriate public education to all handicapped children. This is the fifth such report and provides information for school years 1980-81 and 1981-82.

Progress toward a Free Appropriate Public Education

Number of Children Served

- The number of handicapped children receiving special education and related services continued to rise during school year 1981-82.
  - The states reported to Special Education Programs (SEP) that on December 1, 1981, they were providing services to 4,233,282 handicapped students under EHA and P.L. 89-313 (as incorporated by Chapter 1 of the Education Consolidation and Improvement Act of 1981). This number represents an increase of 55,593 children over school year 1980-81. Since the initial child count in 1976-77, the number has increased by over one-half million.
  - While the overall number of handicapped children served increased from 1980-81 to 1981-82, for the first time 15 states reported fewer handicapped children served than in the previous year. In those 15 states, the decreases were most pronounced in the categories of speech impaired and mentally retarded within the 6-17 age group.
- Since the last annual report to the Congress, and since the first child count was taken in 1976-77, there have been some notable changes in the number of children reported receiving special education and related services for certain handicapping conditions.

  - The most dramatic change has taken place in the learning disabled category. In 1981-82, 1,627,344 children were counted as learning disabled—an increase of 159,330 since 1980-81 and of 830,132 since 1976-77. Growth has also occurred in the number of multihandicapped and emotionally disturbed children served. For multihandicapped children, the number has increased from 50,772 in 1978-79 (the first year in which a count was taken for these children) to 73,832 in 1981-82. For emotionally disturbed children, the increase was from 283,072 in 1976-77 to 341,786 in 1981-82.

  - For the following categories, the number of children served has declined over the five-year period since 1976-77 and has continued to decline during the past year: speech impaired, mentally retarded, other health impaired, deaf and hard of hearing, and visually handicapped. For the mentally retarded, all but seven states reported a decline from 1980-81 to 1981-82. For the other categories, however, even though the national total declined, many states reported an increase in the number of children served. For example, approximately half of the states reported increases in the number of speech impaired and visually handicapped students served. The extent to which the changes reflect shifts in the characteristics of the population served as opposed to changes in the way states classify children is not known.

Personnel

- Just as there have been increases in the child count, so also have there been increases in the number of personnel responsible for serving handicapped children. For special education teachers and related services personnel combined, the number increased from 435,584 in school year 1979-80 to 440,011 in school year 1980-81.

  - For special education teachers alone, the increase from 1979-80 to 1980-81 was five percent. The number of special education teachers of the emotionally disturbed, learning disabled, and multihandicapped increased from school year 1979-80 to 1980-81, whereas the number of special education teachers of the mentally retarded, other health impaired, orthopedically impaired, and deaf-blind decreased. Although not directly proportional, these changes generally followed the increases and decreases in the child count for the same period.

- Although the number of school staff other than special education teachers (e.g., psychologists, occupational and physical therapists) employed to serve handicapped children increased from 151,649 in 1976-77 to 207,384 in 1980-81, the number of such staff has been declining since 1979-80. The number decreased in 1979-80 from 215,140 to 214,730, and again in 1980-81 from 214,730 to 207,384.

Least Restrictive Environment

- The overall percentage of handicapped children served in regular schools, whether in regular or separate classes, has remained relatively constant at slightly more than 92 percent since P.L. 94-142 was enacted. However, within certain handicapping conditions, there have been some noticeable changes in the percentages of children served in different educational settings.
  - The percentage of mentally retarded children served in regular classes decreased by seven percent from 1976-77 to 1980-81 while the percentage served in separate classes increased by five percent during the same time period.
  - For the visually handicapped, the percentage served in separate schools decreased by five percent from 1976-77 to 1980-81, while the percentage served in separate classes in regular schools increased by eight percent.
  - For the orthopedically impaired, the percentage served in regular classes declined by almost 10 percent from 1976-77 to 1980-81. The percentage served in separate classes increased by slightly more than 10 percent, and the percentage served in separate schools increased by slightly more than six percent.

Finance

- Data collected from school year 1977-78 reveal that total nationwide expenditures for the "excess cost" of special education were over $7 billion. The average cost of special education and related services per handicapped child served in 1977-78 was an estimated $3,577 and was 2.17 times greater than the cost of regular education per nonhandicapped child. An adjustment for inflation to school year 1980-81 suggests an average expenditure of $5,109 per handicapped student.

Efforts to Prevent Erroneous Classification

- In 1979, SEP contracted for a national survey which examined local educational agency (LEA) procedures for referring, assessing, and placing students to determine whether procedures were in place to prevent the erroneous classification of children, particularly misclassification on the basis of race or culture.
  - When the study compared referral rates for minority students and nonminority students, it found that elementary-aged minority students were referred for assistance (of any kind) at a rate roughly proportionate to their incidence in the school-aged population. However, secondary-aged minority students were referred at a rate somewhat higher than their incidence in the school-aged population.
  - The diagnosticians surveyed used, on the average, six assessment instruments or techniques with each student evaluated. Approximately two of these were in the educational/academic area. The study noted no difference for minority students as compared with nonminority students in this regard.
  - Academic functioning was rated by diagnosticians and teachers to be the most important factor in determining disability classification and placement for both minority and nonminority students. Nonacademic factors were rated as less important for both minority and nonminority students but were rated as somewhat more important for minority students.
  - When the study asked diagnosticians to designate their "best judgment of the student's probable handicapping condition" for students they were in the process of evaluating, proportionately twice as

many minority as nonminority students were designated as "probably mentally retarded." However, the study found that minority students were not subsequently placed in special education programs in these larger percentages.

- The survey found the percentage of minority and nonminority students referred and subsequently placed in special education programs for the mentally retarded, specific learning disabled, and seriously emotionally disturbed to be essentially equivalent. By far the greatest percentage of minority students--24 percent--was placed in educational programs for the specific learning disabled, as compared with 21 percent of nonminority students. Four percent of both minority and nonminority students classified as handicapped were placed in educational programs for the mentally retarded and three percent in programs for the seriously emotionally disturbed.

- Other SEP activities undertaken to prevent the erroneous classification of children as handicapped include policy clarification, research and identification of successful practices, technical assistance, support for personnel training, and monitoring.

Special Education Programs' Administration of the Act

- SEP's administrative role in ensuring the effective implementation of EHA-Part B is primarily concerned with monitoring, complaint management, technical assistance, discretionary contract/grant program operation, and policy review.

- Monitoring of the implementation of EHA-B and P.L. 89-313 by SEP continues to focus on ensuring and strengthening state capacity to monitor LEAs and public and private agencies. On-site monitoring at the state level focuses on those requirements of EHA-B and P.L. 89-313 for which the state educational agency (SEA) has direct responsibility. The results of site visits conducted by SEP in 1982 indicate that while progress has been made, states are still experiencing difficulty with certain requirements, especially in the areas of general supervision and the monitoring and correcting of deficiencies.

- Under the Memorandum of Understanding between SEP and the Office for Civil Rights (OCR), 127 complaints concerning the implementation of EHA were handled by OCR. Sixty-five percent of these complaints were related to placement and related services.

- SEP is shifting technical assistance efforts from helping states implement procedural aspects of EHA to helping states improve the quality of their special education programs. Five principal areas in which states need technical assistance are:

  - assessment of handicapped students,
  - development of services for adjudicated/incarcerated handicapped students,
  - SEA supervision of other agencies,
  - application of technological developments, and
  - preparation of personnel.

- SEP administered 10 discretionary grant/contract programs designed to support and encourage the discovery, development, and dissemination of innovations and improved practices in the education of handicapped children. These discretionary programs complement SEP's direct administrative efforts by focusing on areas of concern such as personnel preparation, early childhood education, education for the severely handicapped, vocational and adult education, media, and technology.

Progress toward a Free Appropriate Public Education

Section 618 of the Education of the Handicapped Act (EHA), as amended by P.L. 94-142, requires the Secretary of Education to provide to the Congress an annual report on the progress being made toward the provision of a free appropriate public education to all handicapped children. This fifth annual report to the Congress analyzes the progress made in implementing the law in school years 1980-81 and 1981-82. School year 1981-82 marks the sixth full year since the enactment of the law and, because of the phasing in of certain requirements, the second full year in which all the requirements of the law have been in effect.[1]

One method of measuring the progress made toward a free appropriate public education for all handicapped children is to consider the data which Section 618 requires this report to provide. Among these data is information about the number of children receiving special education and related services, the number of personnel available to provide children with needed services, the various settings in which handicapped children are being educated, and the costs of providing these services. Each of these is discussed in this chapter.

The most recent child count information is for school year 1981-82 and was recorded by the states on December 1, 1981. The most recent personnel and setting (least restrictive environment) data were provided for school year 1980-81 in the states' end-of-year reports to SEP. These data and the state grants award data are provided in Appendixes 2-5.

---

[1] P.L. 94-142 was enacted in 1975, but the provision concerning individualized education programs was not made effective until 1977; a free appropriate public education was not required for all handicapped children ages 3 through 18 until 1978, and for all handicapped children ages 3 through 21 until 1980. For age ranges 3 through 5 and 18 through 21, the requirement to provide a free appropriate public education had to be met by these dates unless that requirement was not consistent with a state's law or practice, or the order of any court, respecting public education within those age groups in the state.

Number of Children Served

The number of handicapped children receiving special education and related services continued to rise during school year 1981-82. The 1982 report to the Congress noted that 4,177,689 children were served under EHA and P.L. 89-313[2] during school year 1980-81. For school year 1981-82, the number of children served rose to 4,233,282 (see Table 1), an increase of 55,593. Since the initial child count in 1976, when 3,708,588 handicapped children were reported by the states as receiving services, the number of handicapped children served has grown by over one-half million. Put another way, the number of children receiving special education services has increased by about one percent since school year 1980-81 and by over 14 percent since 1976-77.

In comparison to the number of children enrolled in school (ages 5-17), the proportion of children served as handicapped under EHA has changed slightly in the last year. The total percentage increased from 10.08 percent in 1980-81 to 10.47 percent in 1981-82. Table 2 compares the percentages for each handicapping condition.

While the overall number of handicapped children served showed an increase in 1981-82, for the first time 15 states reported fewer numbers of handicapped children served than in the previous year. In those 15 states, the decreases were most pronounced in the categories of speech impaired and mentally retarded within the 6-17 age group.

Since the last annual report to the Congress, and since the first child count was taken in 1976-77, there have been some notable changes in the number of children reported receiving special education and related services for certain handicapping conditions (see Figure 1 and Appendix 2, Table F).

The most dramatic change has taken place in the learning disabled category. Between 1980-81 and 1981-82, this group of children increased by 159,330 to 1,627,344 and now accounts for four percent of the school-age enrollment and 38 percent of the children receiving

---

[2] P.L. 89-313, which has been incorporated into Chapter 1 of the Education Consolidation and Improvement Act of 1981, provides financial assistance to state agencies and eligible LEAs for projects designed to meet the special education needs of children who are or have been served in institutions for handicapped children.

Table 2

The Percentage of the School Enrollment Served as Handicapped, by Handicapping Condition, for School Years 1980-81 and 1981-82 for the 50 States and the District of Columbia

Handicapping condition	1980-81	1981-82
Speech impaired	2.84	2.83
Learning disabled	3.56	4.04
Mentally retarded	2.02	1.96
Emotionally disturbed	.84	.85
Other health impaired	.24	.20
Orthopedically impaired	.14	.14
Multihandicapped	.17	.18
Deaf and hard of hearing	.19	.19
Visually handicapped	.08	.07
Deaf-blind	.01	.01
Total	10.08	10.47

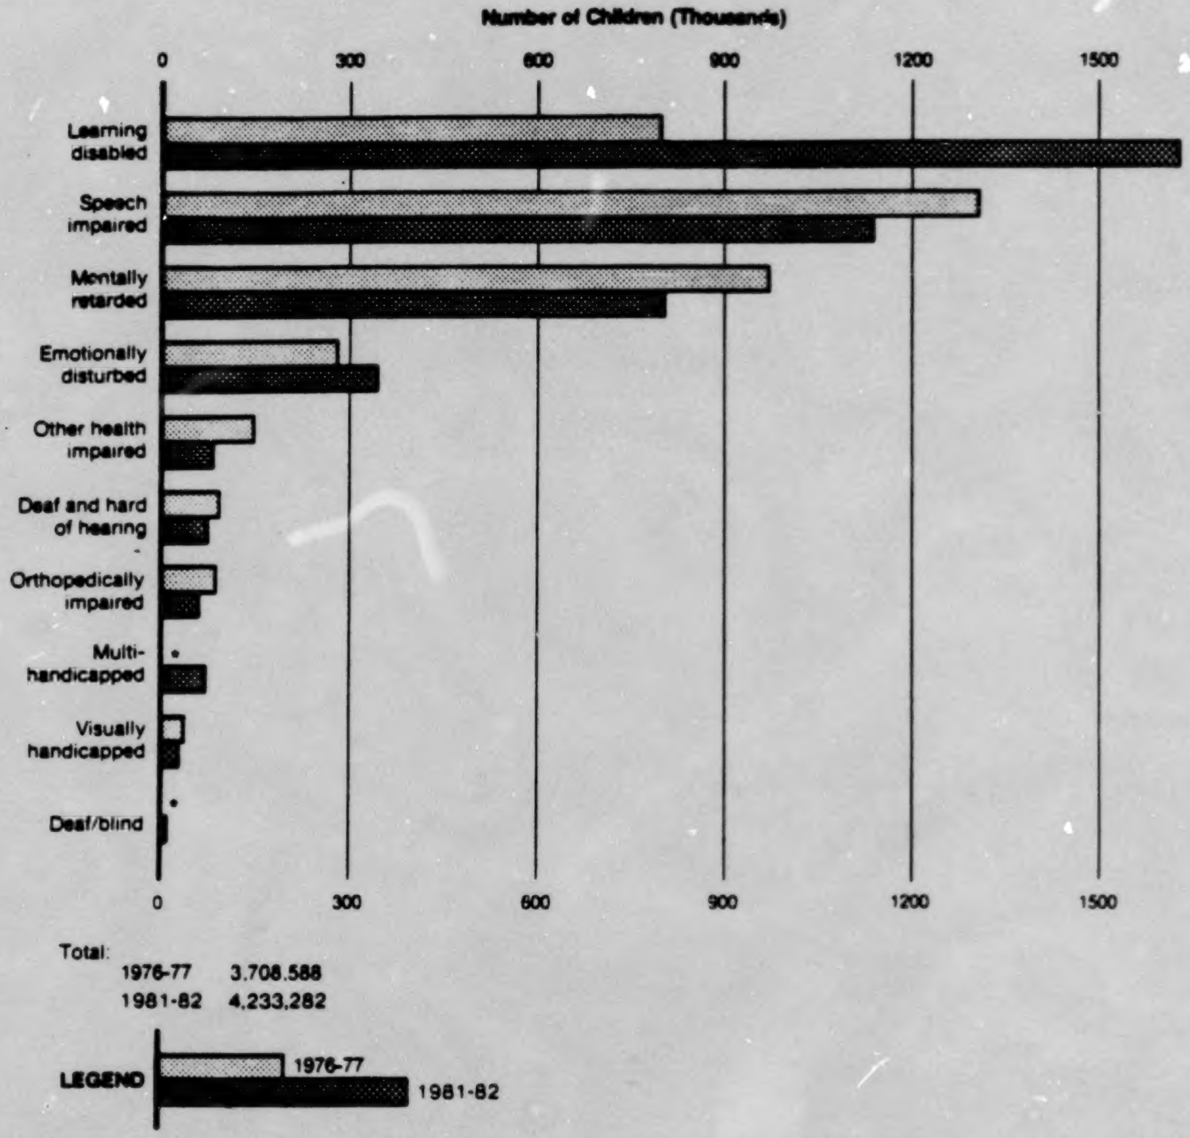
Note. The percentages are based on school enrollment for preschool through twelfth grade children and handicapped enrollment for children ages 3-21.

special education services. Since school year 1976-77, the learning disabled population has increased by 830,132 children, an increase of 104 percent.

The National Association of State Directors of Special Education (NASDSE, 1983) asked the state directors in several states to provide information concerning various child count issues, including reasons for the increase in the count of learning disabled children. Among the reasons most frequently given were:

- Improvement in procedures for identifying and assessing children with learning disabilities. Since the passage of P.L. 94-142, the awareness of learning disabilities has grown, along with public pressure to adequately serve these children. This, coupled with improved assessment techniques, has resulted in the identification and assessment of children whose learning disabilities may previously have gone undetected.

Figure 1 Distribution of Children Ages 3-21 Served by Handicapping Condition, School Year 1976-77 and 1981-82



*Not available in 1976

- Liberal eligibility criteria for learning disabilities. Some states permit local educational agencies (LEAs) to establish their own criteria for eligibility for learning disabled programs. Even where the state does enforce state-wide criteria, these criteria are often liberal enough to permit children with a wide range of learning problems to be classified as learning disabled.

- Cutbacks in other programs and lack of general education alternatives for children who experience problems in the regular class. There has been an increase in referrals of children with learning problems to special education. This is partially because of a decrease in funding of other programs, such as Chapter 1 of the Education Consolidation and Improvement Act of 1981 (previously Title I of the Elementary and Secondary Education Act of 1965) and partially because of the historical lack of alternatives for children who experience problems in the regular classroom. Coupled with the liberal eligibility criteria for the learning disabled classification, this increase in referrals of children to special education has resulted in an increase in the number of children served.

- Social acceptance/preference for the learning disabled classification. Mildly handicapped students who once would have been classified as mentally retarded are increasingly classified as learning disabled. This change has resulted from a preference by parents and administrators for the learning disabled classification, which does not carry the stigma often attached to other classifications, such as mentally retarded. The change has not affected the type of education received since the treatment for these mild handicapping conditions is similar.

- Court order. Additionally, some states are under court order to reevaluate minority children who have been labeled mentally retarded in the past. Many of these children are being reclassified as learning disabled.

The NASDSE information indicates that the states are concerned about the growth in the learning disabled category and are engaging in various efforts to limit that growth, especially efforts to tighten the eligibility criteria. These actions are apparently having some effect. While the national increase in children served as learning disabled was 104 percent from school year 1976-77 to 1981-82, the rate of increase is declining. The increase from 1979-80 to 1980-81 was 15 percent and from 1980-81 to 1981-82, 11 percent.

Although not as dramatic as the growth in the number of learning disabled students served, there has been a steady increase in the number of multihandicapped students served since 1978-79, the first year in which a count was taken of these children. Since then, the number served has increased from 50,772 to 73,832, an increase of 46 percent. As with the learning disabled population, the rate of increase is declining. The increase from 1979-80 to 1980-81 was 14 percent and from 1980-81 to 1981-82, only five percent.

The number of emotionally disturbed children served declined slightly (two percent) from 1980-81 to 1981-82. However, in every other year since 1976-77, the number has increased. In 1976-77, the number was 283,072 and in 1981-82, 341,786, a 21 percent increase.

One reason for the increase in both the multihandicapped and emotionally disturbed child counts has been an intensive effort by many states to identify and serve previously unserved children. In addition, many children now served in the public schools were previously served in private schools or in programs administered by state agencies other than the state educational agency (SEA).

There has been little change from year to year in the number of deaf-blind children served. For all of the other categories not yet discussed (mentally retarded, speech impaired, other health impaired, orthopedically impaired, deaf and hard of hearing, and visually handicapped), the number of children served has declined over the five-year period since 1976-77 and for all but the orthopedically impaired has continued to decline during the past year. For mentally retarded students, the decline from school year 1980-81 to 1981-82 occurred in all but seven states. For the other categories, however, the national figures are deceptive since many states reported increases in the number of children served. For example, increases were reported by approximately half of the states in the number of speech impaired and visually handicapped students served (see Appendix 2, Table F). The extent to which those changes reflect shifts in the characteristics of the populations served as opposed to changes in the way states classify children is unknown.

Personnel

In order to provide a free appropriate public education to all handicapped children, it is necessary that sufficient numbers of trained personnel be available to deliver the educational services. Since the passage of P.L. 94-142 in 1975, a great deal of emphasis has been placed upon ensuring that those trained personnel are in fact available.

Numbers of Special Education and Related Services Personnel

Just as there have been increases in the child count, so also have there been increases in the personnel responsible for serving handicapped children. For special education teachers and related services personnel combined, the increase from school year 1979-80 to 1980-81[3] was one percent (from 435,584 to 440,011). See Figures 2 and 3 for changes in the number of personnel available from school year 1976-77 to 1980-81.

Special education teachers. The increase for special education teachers from 1979-80 to 1980-81 was five percent. The total number of special education teachers has been climbing at a steady rate since 1976-77 (see Appendix 3, Table A). This increase can be attributed to a number of factors, including the need to educate larger numbers of handicapped children and increased federal and state support for teacher training.

The increases and decreases for special education teachers by category generally followed those increases and decreases reported in the child count categories from 1979-80 to 1980-81. Although not directly proportional, the decrease in the number of children reported as mentally retarded, other health impaired, and orthopedically impaired were accompanied by decreases in the number of teachers reported as serving such children. The number of teachers of the visually handicapped, emotionally disturbed, learning disabled, and multihandicapped, on the other hand, increased from school year 1979-80 to 1980-81 as did the child count in each of these categories.

Despite the steady, overall increase of special education teachers, however, recent reports by the National Center for Education Statistics and the National Education Association suggest that teacher shortages may exist again in the late 1980s. Though these reports do not isolate special educators specifically, a 1983 report by Abramson and Hagerty does so. Based on a linear regression, and assuming a uniform production and attrition rate for special education teachers, the report predicts a shortage of 11,268 special education teachers in 1982-83 and of 24,582 in 1983-84. It should be noted that these numbers do not represent vacancies but rather the number of teachers needed to fully serve handicapped children, assuming current

---

[3] Because the most current personnel data are for school year 1980-81, the child count figures referred to in this section are for that year rather than for the 1981-82 school year as in the preceding section.

[2] Actual number of teacher aides equals 93,208.

[3] Actual number of other non-instructional personnel equals 30,139.

pupil-to-teacher ratios. In addition, these figures do not account for the number of teachers who are certified but do not receive a degree to teach handicapped students.

School staff other than special education teachers. The number of school staff other than special education teachers (e.g., psychologists, occupational/physical therapists) employed to serve handicapped children increased from 151,649 in 1976-77 to 207,384 in 1980-81 (see Appendix 3, Table B). The increase occurred within every category of staff except home-hospital teachers which declined from 8,243 to 8,159 over this period of time.

Despite the fact that more school staff are employed overall now than when P.L. 94-142 was first enacted, the number of such staff has been declining since 1979-80. The number decreased in 1979-80 from 215,140 to 214,730, and again in 1980-81 from 214,730 to 207,384. The latter decrease occurred largely because of the decline in vocational education teachers (one percent), supervisors (one percent), and other noninstructional staff (three percent). These decreases were partially offset by a two percent increase in teacher aides.

Ratio of Handicapped Children to Special Education Teachers

One gauge of progress in providing education services to handicapped children is the ratio of students to teachers. In general, the smaller this ratio, the greater the opportunity for individualized attention and instruction tailored to specific student needs.

Although the overall child to teacher ratio remained constant from 1979-80 to 1980-81 at 18:1, significant progress was made in reducing the ratio for particular handicaps for which a smaller class size has been suggested to be beneficial (see Appendix 3, Table C). In this regard, the child-to-teacher ratios declined for the mentally retarded (13:1 to 12:1), orthopedically impaired (14:1 to 13:1), multihandicapped (16:1 to 13:1), deaf and hard of hearing (12:1 to 11:1), and visually handicapped (10:1 to 9:1).

While these changes may not appear large, the actual changes that occurred were often extensive. For example, the 16:1 to 13:1 change in the student/teacher ratio for multihandicapped students represents an increase of 1,480 teachers (a 37 percent increase). In this instance, the decrease in ratio took place even though the number of multihandicapped children served increased by 8,495.

Even in areas where both the number of teachers and the number of children served decreased from 1979-80 to 1980-81 (such as for the mentally retarded and orthopedically impaired), the decline in the number of handicapped students was proportionately larger than the decline in the number of special education personnel. For instance, although the number of mentally retarded students served declined by 4.3 percent from 1979-80 to 1980-81, the number of teachers of mentally retarded students declined by only (approximately) one percent over that same period. Thus, improvements in the schools' ability to individualize the instruction of handicapped children as measured by student/teacher ratios have been realized both in areas where the number of personnel available has increased and in areas where the number has decreased.

Least Restrictive Environment

The legislative history of EHA shows that the Congress was concerned about least restrictive environment (LRE) principles even before the passage of P.L. 94-142. Section 614(d) of P.L. 93-380 required that each state's plan under the Act provide procedures to ensure compliance with LRE requirements. In the plan, the states were required to ensure that, to the maximum extent appropriate, handicapped children, including children in public and private institutions or other care facilities, were educated with children who were not handicapped and that special classes, separate schooling, or other removal of handicapped children from the regular education environment would occur only when the nature or severity of the handicap was such that education in regular classes with the use of supplementary aids and services could not be satisfactorily achieved. These provisions were incorporated as an eligibility requirement into Section 612(5)(B) of EHA by P.L. 94-142.

Previous reports to the Congress have discussed progress in placing handicapped children in the least restrictive environment since P.L. 94-142 went into effect. This report provides, as did past reports, data from the states as to the number of children served by category of handicapping condition and the environment in which they are served.

The four educational settings for which data are reported include regular classes, separate classes, separate schools, and other environments. Of these, both regular and separate classes occur in the regular school facility, and thus even handicapped children who are served in separate classes can be presumed to have some degree of interaction with nonhandicapped children, for at least some portion of the day.

The overall percentage of children served in regular schools, whether in regular or separate classes, has remained relatively constant over the years at slightly more than 92 percent (see Figure 4 for the 1980-81 data). However, within certain handicapping conditions (e.g., mentally retarded, visually handicapped, and orthopedically impaired), there have been some noticeable changes in the percentages served in the four different environments (see Figure 5). The percentage of mentally retarded children served in regular classes decreased between 1976-77 and 1980-81 from 37.68 to 30.20 while the percentage served in separate classes increased from 51.19 to 56.95. Several state directors of special education who discussed these changes with NASDSE indicated that the increase in the number of students in separate classes resulted in part from the public schools now serving severely retarded students who were previously served in private institutions or in programs provided by state agencies other than the SEA. The decrease in the number of students in regular classes can be at least partially accounted for by stricter eligibility criteria. Students who were once classified as mentally retarded and served in regular classes are no longer so classified.

For the visually handicapped, the percentage served in separate schools decreased from 21.66 in 1976-77 to 16.63 in 1980-81, while the percentage served in separate classes in regular schools increased from 16.22 to 24.02. This change is almost certainly a reflection of the increased capacity of school districts to serve visually handicapped students in a less restrictive setting.

For the orthopedically impaired, the percentage served in regular classes declined from 39.84 to 30.11, and the percentage served in separate classes and separate schools increased. For separate classes the increase was from 27.37 percent in school year 1976-77 to 37.64 percent in school year 1980-81; for separate schools the increase was from 9.36 percent to 15.76 percent. This shift is at least partially explained by the nature of services that orthopedically impaired children require and by how expensive it is to serve them. School districts have found that these children can be most effectively and most economically served by centralizing the services they receive. Thus, as programs for the orthopedically impaired have become more sophisticated, there has been increased pressure on school districts to offer the services in one site. In effect, this may result in a conflict between LRE principles and the provision of quality services.

As with the child count data, an examination of the LRE data at the national level does not take into account the wide variations that exist from state to state. For example, even though the national figures show a decrease in the percentage of mentally retarded

Figure 4 Percent of Handicapped Children Served (Ages 3-21) in Four Educational Environments, School Year 1980-81

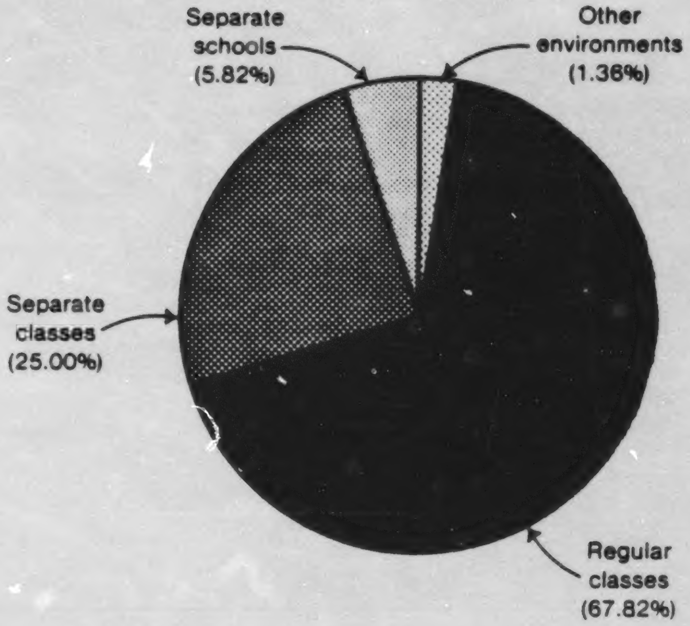

Figure 5 Environments in which 3-21 Year-Old Handicapped Children Were Served during School Year 1976-77 and School Year 1980-81

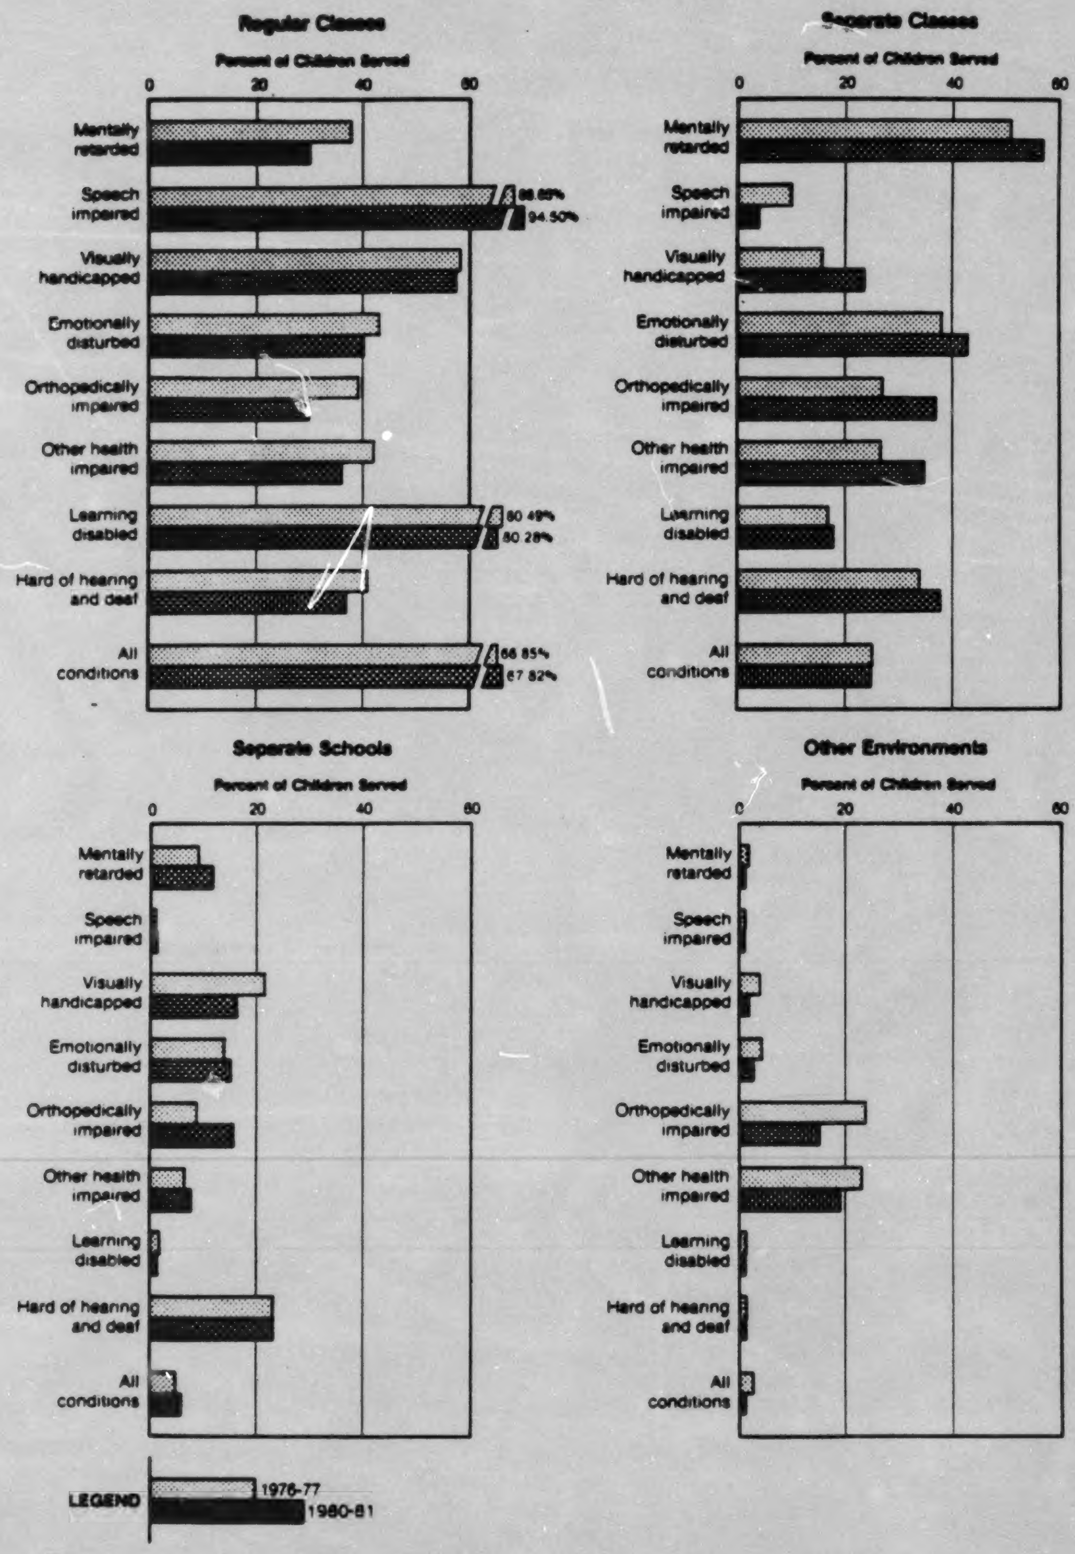

* The sum of all environments for each handicapped population represents 100 percent of the child count for that population

children ages 6-17 served in regular classes since 1976-77, 24 states — virtually half of those reporting — showed an increase. In many cases the increase was in excess of 50 percent.

In case studies conducted in 16 LEAs in nine states over a five-year period, SRI found, consistent with the national findings, that overall there had been little change in the environments in which handicapped students were being served. However, SRI also reported that most of the districts in their study had made significant progress in expanding the number of placement options available and thus were able to provide more appropriate placements based on the needs of individual children. SRI noted that the expansion of available options occurred primarily for mildly handicapped students at first, but that many of the LEAs in their study are now concentrating on increasing options for the more severely handicapped. SRI also reported that the expansion of placement options, which was most rapid during the late 1970s, had slowed somewhat recently.

Finance

Growth in the population of handicapped children who are receiving special education and related services brings a concomitant concern for the availability of the resources which are necessary to provide appropriate services. Congressional interest in the issue of education finance is evident in the requirement in Section 618 of the Act that this area be addressed in the annual report to the Congress on P.L. 94-142 and also by the Congressionally mandated study of school finance. Volume I of the finance study, entitled Prospects for Financing Elementary/Secondary Education in the States was submitted to the Congress by the Secretary of Education in December 1982. In 1976, SEP initiated a national study (Kakalik et al. 1981) to examine the costs associated with providing special education and related services. Data collected from school year 1977-78 revealed that total nationwide expenditures for the "excess cost" of special education (those costs above the cost of regular education) were over $7 billion. The total cost of special education and related services per handicapped child served in 1977-78 was an estimated $3,577 and was 2.17 times greater than the cost of regular education per nonhandicapped child. An adjustment for inflation to school year 1980-81 suggests an expenditure of $5,109 per handicapped student. The range of costs for specific handicapped children varies greatly with the nature and severity of the handicap and the location in which services are provided. Thus, the estimated per child costs are an average figure and cannot be assumed to apply evenly throughout the country.

Summary

It is evident from the information presented that between 1976-77 and 1980-81 that state legislatures and local schools boards have continued to target significant resources to finance the availability of a free appropriate public education for all handicapped children. These resources are reflected in the expansion of the number of special education teachers and related services personnel necessary to provide educational services to over four million handicapped students. Further, state and local educational agencies have improved the quality of available services through lowered teacher/pupil ratios as well as through providing more comprehensive services, permitting a greater array of alternative programs to more adequately meet the specific needs of individual handicapped students. In summary, our nation's schools continue to make significant progress in meeting the goals of P.L. 94-142.

Efforts to Prevent Erroneous Classification

Section 618(d)(2)(C) of EHA, which provides for the Annual Report to the Congress, specifically states that the report shall include "an evaluation of the effectiveness of the procedures undertaken by each state educational agency, local educational agency, or intermediate education unit to prevent erroneous classification of children as eligible to be counted under section 611, including actions undertaken by the [Secretary] to carry out provisions of this Act relating to such erroneous classification." Under the Act, the states are required to assure that procedures and materials used for evaluating and placing handicapped children are selected and administered so as not to be racially or culturally discriminatory and that no sole criterion is used for placement (Section 612(5)(C)). Further, states must attempt to recover any EHA-B funds expended for services to any child erroneously classified as eligible to be counted under the statutory formula (Section 613(a)(5)).

Congress' concern that minority children not be erroneously classified as handicapped was recently emphasized by the findings of OCR in its 1980 Elementary and Secondary Schools Civil Rights Survey. The survey found that the percentage of all minorities in classes for the mentally retarded was considerably higher than would have been expected from their percentage in the school-age population as a whole (see Table 3). (When broken down by minority group, the percentage of American Indians and Blacks was higher than would have been expected from incidence rates; the percentage of Hispanics and Asians, lower.)

SEP has undertaken a number of activities in response to Congressional concerns as addressed in EHA, court cases, and compliance issues identified through OCR and SEP monitoring efforts. These activities are discussed in the final section of the chapter. In addition, in 1979, SEP contracted with Applied Management Sciences, Inc., for a national survey (Contract No. 300-79-0669) which examined LEA procedures for referring, assessing, and placing students to determine whether procedures were in place to prevent the erroneous classification of children, particularly misclassification on the basis of race or culture. Initial analyses of the survey data have been completed, and the final report is expected by late 1983.

Table 3

Percentage of Minority and Nonminority Students in Classes for the Mentally Retarded

Group	Elementary/secondary enrollment	EMR classes	TMR classes
Nonminorities	73.3	55.5	62.5
All minorities	26.7	44.5	37.5
Blacks	16.1	38.7	27.6

Note. The source for this table is the 1980 Elementary and Secondary Schools Civil Rights Survey -- National Summary of Projected Data, Office for Civil Rights, Department of Education Contract No. 300-80-0739, September 1982. Data are projected from a sample of school districts across the nation. EMR = educable mentally retarded, TMR = trainable mentally retarded.

National Survey of Referral, Assessment, and Placement Practices

The survey was conducted from September to December 1980 and designed to provide a representative sample of 100 school districts from which national estimates of assessment procedures and activities could be examined. Within these districts, 287 elementary and 177 secondary schools were randomly selected and from this sample of schools 450 principals, 6,441 teachers, and 820 diagnosticians and guidance counselors were randomly selected. Both SEA and LEA documents and individual student records were reviewed. Self-administered questionnaires were completed by teachers, related services personnel, diagnosticians, and guidance counselors; and personal interviews were conducted with district and building administrators as well as with diagnostic and guidance personnel.

The questionnaires were designed to elicit information about assessment procedures and practices related to specific children. The development of child-specific questionnaires was an effort to avoid the often vague generalizations resulting from asking respondents questions concerning what they "typically do."

The following discussion presents some preliminary findings from the study comparing referral, assessment, and placement procedures for minority and nonminority students. Here, only aggregate findings are described. The final report will examine the data in greater detail and will include a discussion of variations based on such factors as district size and of interactions between the factors.

Referral

The study first examined the LEA student referral process in an attempt to discern whether efficient procedures at this initial step were in place to prevent the eventual erroneous classification of children. The schools surveyed in the study appeared, for the most part, to be efficiently processing referrals through the system. Based on the initial results of this survey, it is estimated that from the beginning of school in September until mid-December 1980, teachers across the nation requested assistance for nearly 3.4 million students. School systems had mechanisms in place for handling these requests and by mid-December:

- 1.76 million (52%) students for whom teachers had requested assistance had been evaluated and placed and were receiving some type of assistance -- either special education services (845,000 students) or remedial or other supplemental services (915,000 students).

- 1.26 million (37%) were in the process of being evaluated.

- 370,000 (11%) were still waiting to be evaluated.

Since it is likely that at least some of the 3.4 million teacher requests for assistance were made toward the end of the three-month period, the fact that in mid-December only 370,000 students were waiting to be evaluated indicates that school systems appear to be efficiently responding to these requests.

When the study compared referral rates for minority students with nonminority students it appeared that minority students were referred for assistance of any kind (remedial reading, Title I services -- now Chapter 1 of the Education Consolidation and Improvement Act of 1981, speech pathology services, special education, etc.) in roughly the same proportion as they occur in the school-age population (see Table 4). However, at the secondary level, the referral rate for minority students is higher than their estimated proportion in the school-age population. The reasons for the higher referral rate for minority students at the secondary level are not clear but should be examined in future studies.

Table 4

Percentage of Minority and Nonminority Students Referred for Assistance of Any Kind

	Minority			Nonminority		
	Elementary	Secondary	Total	Elementary	Secondary	Total
All referrals	30	42	34	70	58	66
Incidence in the school-age population[a/]	30	29	30	70	71	70

[a/] Sample estimate of incidence in school-age population.

Assessment

The study then looked at the assessment procedures in school districts throughout the country in an attempt to determine if procedures at this stage were in place to prevent children from being erroneously classified. The study's initial analyses show that the school districts surveyed were generally using several assessment measures for determining student eligibility for special education services. On the average, diagnosticians used six assessment instruments or techniques with each student evaluated (see Table 5). Approximately two of these were in the educational/academic area. The remaining evaluations were fairly evenly distributed across the cognitive, personality, behavioral, and perceptual areas. The study noted virtually no differences for minority students as compared with nonminority students in this regard. See Table 6 for a summary of the types and average number of specific tests administered by diagnosticians to minority and nonminority students.

The results from the survey seem to suggest that diagnosticians are demonstrating a conscientious effort to collect data about the individual student's skills and levels of development in areas beyond cognitive ability and thus to prevent erroneous classification. The study also appears to indicate that nonstandardized evaluation measures were widely used to supplement the use of standardized tests, as was observation information from parents, teachers, and others.

Academic functioning was rated by diagnosticians and teachers to be the most important factor in determining disability classification

Table 5

Average Number of Tests Administered for Each Probable Handicapping Condition

Diagnosticians' indication of "probable handicapping condition"	Minority	Non-minority
Mentally retarded	6.3	6.0
Speech impaired	6.3	4.1
Specific learning disabilities	6.1	6.0
Seriously emotionally disturbed	6.0	6.5
All other handicapping conditions combined	6.8	6.5
Probably not handicapped	4.5	5.5
All students evaluated	5.9	5.8

Table 6

Average Number of Specific Tests Administered by Type of Test

Type of test	Minority	Nonminority
Educational/academic	1.7	1.8
Cognitive/intellectual	1.2	1.1
Personality/behavioral	1.3	1.4
Adaptive behavior/self-help	0.7	0.7
Perceptual/motor	0.9	0.7

and placement for both minority and nonminority students. The nonacademic factors shown in Table 7 were rated as less important for both minority and nonminority students but were rated as somewhat more important for minority students.

A large difference was noted in one regard between minority and nonminority students who were in the process of having an evaluation completed by a diagnostician in the fall of 1980. The diagnosticians were asked to designate their "best judgment of the student's probable

Table 7

Average Rating of the Importance of Five Nonacademic Factors in Determining Disability Classification (Diagnosticians) and Placement (Teachers) of Minority and Nonminority Students

Factors	Diagnosticians		Teachers	
	Minority	Nonminority	Minority	Nonminority
Lack of other source of support in the environment	3.2	3.5	3.2	4.2
Degree of socioeconomic disadvantage	3.6	3.9	3.4	4.5
Cultural deprivation	3.5	4.0	3.4	4.5
Linguistic/language differences	3.8	4.5	3.7	4.6
Ethnicity of student	4.1	4.6	3.6	4.7

Note. Ratings were based on a five-point scale, where 1 = most important factor, 2 = critical, 3 = important, 4 = least important factor, 5 = not considered.

handicapping condition." As can be seen in Table 8, proportionately twice as many minority as nonminority students were designated as "probably mentally retarded." However, the study found that minority students were not subsequently placed in special education programs in these larger percentages. Further investigation is needed to determine the reasons for these differences.

Placement

The survey suggests that the percentage of minority and nonminority students referred and subsequently placed in various types of special education programs during the fall of 1980 was essentially equivalent for three of four handicapping conditions (see Table 9). An equal percentage of minority and nonminority students classified as handicapped was placed in educational programs for the seriously emotionally disturbed and for the mentally retarded — three and four percent, respectively. By far the greatest percentage of minority students -- 24 percent -- was placed in educational programs for the

Table 8

Percentage of Minority and Nonminority Students by Probable Handicapping Condition as Designated by Diagnosticians

Probable handicapping condition	Minority	Nonminority
Mentally retarded	20	10
Speech impaired	2	3
Specific learning disabilities	42	48
Seriously emotionally disturbed	14	14
All other handicapping conditions combined	10	11
Probably not handicapped	12	14
Total	100	100

Table 9

Percentage of Minority and Nonminority Students Referred for Any Type of Assistance Who Were Subsequently Placed in a Special Education Program during Fall 1980

Educational placement	Minority	Nonminority	All
Total receiving special education	41	52	48
Mentally retarded	4	4	4
Specific learning disabilities	21	24	23
Seriously emotionally disturbed	3	3	3
Speech impaired	15	22	20

Note. More than half of the students for whom teachers requested assistance were placed in remedial/supplemental programs rather than special education programs. The percentage in remedial/supplemental programs were as follows: minority, 70 percent; nonminority, 56 percent; all, 61 percent. The total percentage of students receiving special education services and remedial/supplemental services adds to more than 100 because some students were receiving both types of services.

specific learning disabled, as compared with 21 percent of nonminority students.

Summary

The initial analyses from the erroneous classification study suggest that for the most part school districts have developed efficient procedures for responding to teachers' requests for assistance. Assessment procedures appear to incorporate at least some of the EHA requirements for preventing erroneous classification such as the use of multiple criteria in classifying and placing handicapped children. While the proportion of minority students referred by teachers at the elementary level was roughly equal to their incidence in the school-age population, at the secondary level minority students were referred at a higher rate than their occurrence in the school-age population. However, in terms of placement in special education programs, it appears that during the fall of 1980 minority students were being placed in various types of special education programs at a rate that was essentially proportional to nonminority students. This finding may indicate that the procedures instituted under EHA to prevent the erroneous classification of students as handicapped, in particular misclassification on the basis of race or culture, are having some effect. It should be noted, however, that the findings reported in the study are based on initial analyses, and subsequent analyses may provide further clarification.

SEP Activities

In addition to contracting for the national survey just discussed, SEP has undertaken a number of other complementary activities to strengthen SEA and LEA efforts to prevent the erroneous classification of students as handicapped. These activities have included policy clarification, research and identification of successful practices, technical assistance, training, and monitoring. A brief description of each activity is presented below.

Policy Clarification

Critical to the accurate classification of students as handicapped is an understanding of the definitions of the various handicapping conditions. To assure an adequate and consistent understanding of the handicapping conditions included under P.L. 94-142, SEP has disseminated a series of bulletins and letters to the states (see the Reference List). These have included clarifications of the definitions of handicapping conditions, of the phrase "adversely affects a child's educational performance" in the definition of speech impaired, and of the regulations governing the classification of students as learning disabled.

Research and Identification of Successful Practices

Over the years, SEP has focused multiple efforts on identifying practices which work to prevent the erroneous classification of handicapped students. For example, several of the learning disabilities research institutes funded by SEP have developed identification and assessment procedures and techniques for classifying learning disabled students more accurately. One focus of these institutes in recent years has been on the use of various nondiscriminatory assessment techniques.

Several of SEP's special studies have identified successful field-based practices that prevent erroneous classification. One study (Applied Management Sciences, 1980) found that some LEAs have established committees of regular and special education personnel at the school level which meet to consider teacher referrals of students experiencing academic difficulties. These committees work with referring teachers to be sure that all appropriate regular education options or solutions have been tried before the student is referred for special education assessment. Such a practice tends to screen out many referrals of students who are not handicapped but who simply need some remedial help.

Successful techniques and practices identified through research studies are incorporated into SEP technical assistance activities.

Technical Assistance

Many of the technical assistance efforts of the 12 SEP-sponsored Regional Resource Centers have focused on the prevention of erroneous classification. For example, during the past three years, four centers have had the specific responsibility for identifying, cataloging, and disseminating information about successful identification and assessment or placement practices. This information has been systematically incorporated into the technical assistance activities that the centers have provided for SEAs. In addition, materials have been developed through the learning disabilities research institutes to aid in the appropriate identification and classification of students as learning disabled. These materials are being disseminated to the states.

Training

Federal dollars have been used to train groups involved in the identification, assessment, and placement process. Grants have been awarded to train pediatricians, allied health personnel, and regular class teachers to properly identify handicapped children in order to reduce inappropriate referrals. The University of Minnesota currently is funded to conduct nationwide training of school psychologists in appropriate assessment and classification techniques. A number of parent training projects have been funded over the years to provide parents with the knowledge and skills necessary to assure that their children are accurately identified, assessed, and placed. Finally, some 250 colleges of education have received funds to train their regular education faculty in identification, assessment, and placement of handicapped children. These faculty members, in turn, have instituted curriculum changes in their preservice programs to provide their students with similar training so that, increasingly, regular education teachers are entering the schools with such knowledge and skills.

Monitoring

The SEP monitoring efforts to prevent erroneous classification of students as handicapped have a dual focus -- verifying the child count figures reported by the states and reviewing the state procedures related to the identification, assessment, and placement of children. As states submit their annual child count figures to SEP, each category of handicapping condition is examined for each state and compared with past child count figures as well as with expected prevalence rates. When discrepancies are noted, states are asked for explanations and, in some instances, a closer look at state procedures for identifying and classifying children may become necessary.

When the state submits its three-year plan, state procedures for identifying, assessing, and placing handicapped children are reviewed and then monitored through on-site monitoring visits. On-site monitoring focuses not only on the adopted procedures of the SEA, but also on the procedures used by the SEA to verify that LEAs and IEUs are following the mandated procedures to prevent the erroneous classification of handicapped children. The existence of the SEA verification efforts is attested to by the fact that more than half the states adjust their child counts downward during a funding cycle as they detect instances where students have been erroneously classified as handicapped.

Thus, through the years, SEP has undertaken a comprehensive approach to preventing the erroneous classification of students as handicapped. Such efforts will continue in the future and will be particularly targeted on problems identified through special studies, such as the study reported in this chapter, as well as through other sources.

Special Education Programs' Administration of the Act

SEP's administrative role in assuring the effective implementation of the EHA is primarily concerned with monitoring, complaint management, technical assistance, discretionary contract/grant program operation, and policy review.

Monitoring

SEP monitoring of the implementation of EHA-B and P.L. 89-313 continues to focus on ensuring and strengthening state capacity to monitor LEAs and other public and private agencies. Recent efforts have focused on the development of screening documents which will assist SEP and the SEAs in evaluating the states' effectiveness in implementing the law and in identifying current and potential problems of administration. To develop a screening document, SEP compiles data about a state from a variety of sources, including federal, state, and local agencies, parent/advocacy groups, litigants, and others. Once the document is drafted, it is used by SEP in evaluating the state's efforts and problems in administering the laws. The document is sent by SEP to the SEA for review and comment and is used by the SEA for self-assessment and evaluation of its programs. To date, screening documents have been completed for 18 states. As each new document is completed, it will be updated and reviewed annually by SEP as one way of determining the continued effectiveness of state efforts to protect the rights of handicapped children.

The screening document is also used as one means for determining the type and frequency of the monitoring reviews that SEP conducts. All states receive on-site review at least once every three years. It is possible, however, that a state will be monitored more often than that. Such a decision is based on analysis and discussions of a state's previous and current implementation of EHA-B and P.L. 89-313 requirements.

When planning for a monitoring review, SEP has three options available: off-site monitoring, on-site monitoring at the state level, and on-site monitoring at both the state and local level. Review of the screening documents and other available data in 1982 resulted, in most cases, in on-site monitoring at the state level. This type of monitoring includes a site visit to the state and preparation of a program review letter which is sent to the state following the visit. The program review letter cites concerns SEP noted during its visit, makes recommendations for improved administration of the laws and, where appropriate, includes commendations for outstanding aspects of the state's program. The SEA responds to the letter with a voluntary implementation plan, requests technical assistance in specific areas, and outlines expected completion dates for the plan's goals. The SEA must later supply documentation to show that the implementation plan has been successfully carried out.

During state-level review, SEP monitors only those requirements of EHA-B and P.L. 89-313 for which the SEA has direct responsibility, such as general supervision; monitoring and correcting of deficiencies; complaint resolution; review of hearings by the SEA; approval of local applications; administration of funds by the SEA; and administration of state-operated or state-supported schools, state advisory panels, the comprehensive system of personnel development, and preschool incentive grants.

The results of the site visits conducted in 1982 show that states are still experiencing some difficulty with certain requirements of the laws, especially in the areas of general supervision and the monitoring and correcting of deficiencies. In the area of general supervision, a number of states continue to be deficient in applying the standards of EHA-B and P.L. 89-313 to state correctional facilities. However, progress has been made. Some states have established task forces to study the issue, others are drafting new standards, and in some instances, new legislation is being promulgated to address the problem.

In the area of monitoring and correcting deficiencies, it was found that while many states have procedures for regular monitoring visits to LEAs and state agencies, in many cases there is not an adequate system in place for following up on these visits to ensure that deficiencies have been corrected. Where this problem has been found, the SEA has taken steps to revise its monitoring process to formally include follow-up activities.

Complaint Management

The memorandum of understanding (MOU) between SEP and OCR concerning the resolution of complaints continues in effect. Between October 15, 1980, the date the MOU was signed, and February 13, 1983, 127 complaints were received by SEP and referred to OCR. A complaint is referred to OCR when it alleges a violation that is covered both by Section 504 of the Rehabilitation Act of 1973 and by EHA. Complaints concerning only EHA-B are handled by SEP.

A review of the complaints forwarded to OCR as of February 13, 1983, indicates that 82 (65 percent) of the 127 complaints received were related to placement and related services (see Table 10). Specifically, 52 (41 percent) were about placement while 30 (24 percent) dealt with related services. Right to education, evaluation, individualized education programs, and procedural safeguards combined to account for 31 percent of the complaints with individualized education programs, at 11 percent, being the largest of this group. Confidentiality and private school placements accounted for only about four percent of the complaints.

By February 13, 1983, OCR had closed 99 of the 127 complaints referred by SEP. Fifteen were returned because OCR felt they could more appropriately be resolved by SEP under EHA, while 13 were pending resolution at OCR. OCR anticipates that the 13 pending complaints will be resolved within two months.

Table 10

Complaints Forwarded to OCR by SEP from October 15, 1980, to February 13, 1983

Nature of complaint	Frequency of complaint
Right to an education	5
Evaluation	13
Individualized education program	14
Procedural safeguards	8
Confidentiality	3
Placement	52
Related services	30
Private school placements	2

Technical Assistance to States

Section 617 of EHA requires the Department to provide technical assistance to states to assist them in implementing the provisions of the Act. Over the years, technical assistance has been provided directly by SEP staff, as well as indirectly through discretionary contracts and grants. The focus in the past has been on providing consultative assistance. This type of assistance was well suited to state needs during the early years of implementation, when states were concentrating on the procedural aspects of implementation (e.g., developing policies and procedures consistent with the Act, learning how to write a state program plan, determining what information should be specified in an individualized education plan, etc.).

SEP monitoring visits and special studies suggest that most states now have policies and procedures in place that are consistent with the Act. While certain policy and procedural questions remain concerning issues such as private schools and interagency agreements, many of the issues states currently face are qualitative or programmatic. To resolve such issues, states need access to the most recent special education research and practice information from federally sponsored research, development, and demonstration efforts and from the experience of states facing similar problems. Thus, while the present goal of SEP technical assistance efforts remains the same as in the early stages of implementing the Act -- assisting SEAs in providing handicapped children with a free appropriate public education — SEP is refocusing its technical assistance efforts to conform to changing state needs.

State technical assistance is provided by SEP primarily through the Division of Assistance to States (DAS). DAS has recently been reorganized to reflect the increased impetus and modified approach in its delivery of technical assistance to states. The recently established Program Assistance Branch (PAB) is specifically charged with technical assistance development and delivery. This branch comprises the Regional Resource Center Section and the State Program Assistance Section.

To meet changing state needs, DAS is now in the process of designing a technical assistance approach that seeks to:

- capitalize on the national perspective provided by various SEP data bases to identify, across states, problems in providing a free appropriate public education to all handicapped children;

- draw upon a variety of resources within SEP to provide states with information about the most recent developments in special education research, technology, programs, and practices which are relevant to identified problems;

- identify problem areas for which policy clarification or development of compliance standards is necessary and assist appropriate SEP units in initiating such activities; and

- draw together states that are experiencing similar problems for mutual problem solving.

The model presently planned to implement this approach provides for both direct and indirect technical assistance service delivery with some activities developed and delivered by DAS staff and some by contractors, grantees, staff from other federal programs, or by the states themselves. DAS activities will focus heavily on remediating needs and problems that cut across states and regions.

The Regional Resource Center (RRC) program has been, and continues to be, the primary mechanism for delivering technical assistance to individual states. This program -- established by contract in fiscal year 1969 -- supports several regional centers that assist SEAs and LEAs in developing quality programs and services for handicapped children. The RRCs accomplish this by working with SEAs, LEAs, and consumer group representatives in their regions to identify and analyze persistent problems that interfere with the provision of special education and related services. The RRCs then link the SEAs and LEAs with, and subsequently help them to adopt, the most recent developments in special education research, technology, and practices that can be used in solving the identified problems. (More information is provided about the RRC Program later in this chapter under the "Discretionary Programs" section.)

It is anticipated that DAS staff will work closely with the RRCs in developing technical assistance activities and providing cross-state and cross-regional assistance. The RRCs will continue to work with individual states as well as serve as a major vehicle for providing cross-regional assistance to states. By drawing upon the wide scope of information available to SEP and continuing to use the RRCs to deliver assistance based on identified state and regional problem areas, scarce resources can be efficiently shared by states.

DAS has identified five principal areas in which states need technical assistance. They are (1) assessment of handicapped students, (2) development of services for adjudicated/incarcerated handicapped students, (3) SEA supervision of other agencies, (4) application of technological developments, and (5) preparation of personnel. Table 11 lists these and other topics of concern obtained from DAS state monitoring reports, RRC regional and state needs assessments, and data collected by the National Association of State Directors of Special Education (NASDSE).

NASDSE's Project Forum is another contract that assists SEP in providing technical assistance to states by analyzing important special education issues and practices in SEAs and LEAs. SEP uses these analyses to determine technical assistance needs and design appropriate remedial activities. The project has also established a communication network of SEAs and LEAs that provides SEP with timely feedback about current and emerging trends in special education. These SEAs and LEAs,

Table 11
Areas in Which States Require Technical Assistance

Assessment of handicapped students	• Nondiscriminatory testing • Assessment of special populations • Early childhood assessment • Assessment of learning disabled students • Efficiency in assessment • Assessment for placement and program planning
Development of services for adjudicated/ handicapped students	• Identification/assessment • Interagency collaboration • Programming options • Personnel • Procedural safeguards — assignment of surrogate parent — due process/hearing rights
SEA supervision of other agencies	• Interagency agreements — development of standards for programs run by other agencies — models of interagency agreements — inservice training for affected personnel — monitoring of agreements • Child count — validity — efficiency • Monitoring — procedures to monitor LEAs — procedures to monitor other state agencies — maintaining records and follow-up • Preschool and early childhood planning
Application of technological developments	• Training • Management information • Tracking and monitoring individualized education programs • Applications in rural and remote areas
Preparation of personnel	• Procedures for effectively projecting needs • Strategies for recruitment and retention — rural areas — high-risk areas — areas with low incidence populations • Models for comprehensive training of personnel

in turn, receive technical assistance through their participation in the communication network. Administered by SEP's Division of Educational Services (DES), this project plays an integral part in the DAS technical assistance model.

DES also administers Project EduTech, a three-year technical assistance contract that assists SEAs and LEAs in the use of appropriate technological alternatives in special education service delivery. The project is designed to unite educators and technologists in efforts to improve the delivery of services to handicapped children. Ongoing activities include selecting persistent and widespread special education issues on which to focus during each year, developing and disseminating information about technological developments that may resolve these issues, and establishing and maintaining an information system.

The Technical Assistance Development System (TADS) is an SEP-funded technical assistance center, administered by the Division of Innovation and Development, that has been providing services to SEP and its Handicapped Children's Early Education Program (HCEEP) since 1971. In addition to providing program development assistance to approximately 54 HCEEP demonstration projects, the center assists approximately 20 Early Childhood Outreach Projects. The project also maintains a functional information system for the benefit of the HCEEP projects, analyzes information relative to the early education of handicapped children, and provides other ad-hoc technical assistance activities as requested by SEP.

SEP, then, is presently carrying out its responsibilities to provide technical assistance to states as mandated by EHA. As has been discussed, SEP has been reorganized, and a plan for a cogent technical assistance system within DAS is being implemented. This plan is cost-efficient and consistent with changing state needs. SEP will continue to actively seek ways to provide timely and effective technical assistance to states as they struggle with complex issues in the face of serious economic constraints. It is believed that the steps now being undertaken will result in enhanced technical assistance as well as closer coordination and cooperation among federal, state, and local agencies as they strive to provide the most efficient service possible to our nation's handicapped children.

Discretionary Programs

SEP administers 10 discretionary grant/contract programs designed to support and encourage the discovery, development, and dissemination of innovations and improved practices in the education of handicapped children. These discretionary programs complement SEP's direct administrative efforts by focusing on areas of concern such as personnel preparation, early childhood education, education for the severely handicapped, vocational and adult education, media, and technology.

Handicapped Children's Early Education Program — This program, authorized by Part C of EHA, provides funds for the development, demonstration, and dissemination of experimental educational practices for adoption and adaptation by SEAs, LEAs, and private agencies. There are five components in the program: demonstration projects to introduce innovative approaches; outreach projects to stimulate replication of successful demonstration projects; state implementation grants to develop and implement coordinated statewide plans for serving all preschool handicapped children; early childhood institutes to conduct research; and technical assistance to assist in the demonstration and outreach projects. During fiscal year 1982, SEP funded 120 projects for $16,800,000. It is expected that between 80 and 95 percent of the demonstration programs will continue and that support for their continuation will come from sources other than SEP. It is also expected that the outreach projects will stimulate services to 4,700 previously unserved or underserved preschool handicapped children and their families.

Regional Postsecondary Programs — The Regional Postsecondary Program authorized by Part C of EHA provides funds for the continuation and expansion of support services needed by the deaf and other handicapped persons so that they may benefit from technical-vocational, postsecondary, or adult education. During fiscal year 1982, the program funded four Congressionally stipulated projects ($1,964,000) to provide technical-vocational and postsecondary education for deaf persons. In addition, 11 grants were awarded for $868,000 to develop and demonstrate model innovative approaches in the provision of support services to, or in the modification of programs for, handicapped students in postsecondary institutions. This program directly provided services to about 5,000 handicapped students and is estimated to have had an impact on tens of thousands more as a result of disseminating the model practices. Further, 80 to 90 percent of the deaf students affected by the program obtained employment or went on to advanced educational opportunities. It is expected that 75 percent of the demonstration grants will generate cost-effective support service models.

Deaf-Blind Program -- In 1968, P.L. 90-247 established centers and services for deaf-blind children. Currently, 15 centers are funded for $13,565,000. These centers provide diagnostic and evaluative services; educational and training services; and consulting and counseling services for parents, teachers, aides, and others working with deaf-blind children. Approximately 5,300 deaf-blind children receive educational/training services in 200 institutions supported by this program. During fiscal year 1982, the Deaf-Blind Program also provided $1,795,000 for 16 projects which focused on the development of models for the integration of deaf-blind children and youth with nonhandicapped children of their own age, deinstitutionalization of deaf-blind children into community placements, design of vocational training for deaf-blind adolescents, development of approaches to total life planning, identification of children at risk of becoming deaf-blind, and adaptation and modification of curriculum.

Severely Handicapped Programs — Establishment of the Severely Handicapped Children and Youth Program was consistent with the EHA mandate that the most severely handicapped children receive priority attention. In fiscal year 1982, 38 demonstration projects were funded at $2,880,000. These projects will result in the development of models for the integration of severely handicapped children into less restrictive environments, innovative educational approaches, education of autistic children, vocational education in technological areas, and designs for comprehensive service delivery to severely handicapped children. It is expected that the projects will provide educational or training services to 2,890 severely handicapped children, inservice training to 2,200 professional and paraprofessional personnel, and guidance and other services to 2,100 parents of severely handicapped children. Finally, it is expected that through replications of these demonstration projects, an additional 2,160 severely handicapped children will receive new or improved educational programs. Although the needs of the severely and profoundly handicapped are both extensive and expensive, federal initiatives such as these are making continuous progress toward improving services to this priority population of handicapped children.

Personnel Preparation Program -- EHA, Part D, authorizes the preparation of personnel required to provide all handicapped children a free appropriate public education. This program is directed to (a) provide fully trained and certified special education teachers, including early childhood specialists, administrators, supervisors, and speech-educators; (b) train doctoral and postdoctoral teacher trainers, researchers, and administrators; (c) train support personnel, including career educators, recreation specialists, health services personnel, school psychologists, social service providers, physical therapists, and occupational therapists; (d) train SEA personnel and their constituencies; (e) develop innovative instructional models for use by providers of preservice training so that they can train regular classroom teachers; and (f) provide instruction for trainers of volunteers.

Recruitment and Information Program -- The Recruitment and Information Program authorized by EHA, Part D, is designed to disseminate information about the needs and rights of handicapped children and youth, and about the programs, services, and resources available to them. The program promotes public awareness and disseminates information to parent coalitions and other concerned groups. During fiscal year 1982, the program funded four contracts for $720,000. It is expected that, in addition to a broad media campaign aimed at the general public, the program will provide information on a quarterly basis to more than 2,500 organizations. A major goal of this program is to encourage and assist parents and schools in the cooperative development of programs to meet the individual needs of handicapped children.

Innovation and Development Program -- This program contains six major components designed to identify, research, and demonstrate solutions to problems of educating handicapped children; develop and disseminate innovative support systems and techniques to improve the performance of handicapped children and teachers and other practitioners serving the handicapped; and create mechanisms that will produce the broadest possible dissemination and use of the products of research and development. In fiscal year 1982, under the field-initiated research component, 29 projects were funded for $2,719,076 to support a wide range of research activities initiated in the field. Under the student research component, $191,918 was provided for 21 special education research projects directed by students (primarily doctoral candidates). This component enhances research training opportunities in special education graduate training programs and encourages new personnel to enter the field of special education research. Under the directed research component, eight research projects on critical topics not adequately addressed through other support mechanisms were funded for $963,299. The institute component provided a total of $3,714,567 to eight institutes to support research on a few selected topics requiring long-term programmatic research. The new information and products developed by the institutes are disseminated to several target audiences, and particularly to direct service providers. The demonstration component provided a total of $1,929,238 to 18 projects designed to develop and demonstrate innovative approaches in special education for school-aged children. Finally, one technical assistance project was funded for $1,086,875 to assist the demonstration projects in such areas as needs assessment, packaging models, and program management. Since 1964, over 1,000 research and demonstration projects have been supported under this program. During this period, researchers, inventors, curriculum developers, museum administrators, program personnel in the arts, recreation and physical educators, economists, school administrators, and many others have been provided funding for innovative projects.

Media Services and Captioned Films -- As authorized by Part F of EHA, this program is designed to adapt, distribute, develop, and disseminate innovative applications of educational media, materials, and technology. The program has included captioning films and television presentations for the deaf, providing assistance to Recording for the Blind, providing support for the National Theatre of the Deaf, funding two media and materials centers for the handicapped, developing a marketing program, and assisting in the development of new media and technology. During fiscal year 1982, this program provided $11,520,000 for 100 awards. The program represents the primary national effort to make films and television accessible to the deaf and hearing impaired.

Another goal of this program is to assure that appropriate technology is available, of good quality, and used efficiently to improve the education, independent functioning, and employment of handicapped individuals. The marketing activities of the program complement these efforts. They focus on developing innovative materials for handicapped learners and their teachers by providing technical assistance to developers and by increasing the national dissemination of materials not ordinarily distributed by the commercial sector.

Regional Resource Center Program -- The Regional Resource Center (RRC) Program is authorized by Part C of EHA. Its purpose is to assist SEAs and LEAs in providing quality, coordinated services to handicapped children. In 1982, the program consisted of 12 regional centers that assist states in identifying and solving their most persistent problems in providing quality educational evaluations and programs for handicapped children. By expanding the dissemination of research, technology, and successful practices, the RRCs help states develop the foundation needed to assure the provision and maintenance of full educational opportunities to all handicapped children. The increased emphasis on states to assure the availability of a free appropriate public education while at the same time trying to contain special education costs has resulted in the increased need for the RRC support initiative.

Special Studies Program -- The Special Studies Program authorized by Section 618 of EHA is responsible for describing national progress in the education of handicapped children. During fiscal year 1982, the program supported two projects for $480,000. These projects provided the information for preparing this report to Congress and helped SEAs and LEAs to assess and improve their current policies, procedures, and practices. The studies funded by this program provide an information base for analyzing how effectively the Act is being implemented. The information provided makes it possible to compare variations in children being served, personnel available and needed, and placement of handicapped children across states.

Summary

Administrative activities of SEP aimed at facilitating the implementation of P.L. 94-142 include compliance, technical assistance, and targeting of discretionary programs. These activities are the mainstay of the federal effort to assist SEAs and LEAs to provide all handicapped children a free appropriate public education. SEP has continued to modify its approach to carrying out its administrative role in response to the stronger performance of states in the achievement of this goal.

Appendix 1

EVALUATION OF THE EDUCATION FOR ALL HANDICAPPED CHILDREN ACT, P.L. 94-142

This section describes the specific evaluation activities supported by special studies monies from 1976 through 1982. These studies have been designed to provide information requested by Congress concerning the implementation of P.L. 94-142; describe and assist federal, state, and local agencies' efforts in implementing policies and procedures required by P.L. 94-142; and provide information for enabling state and local education agencies to increase the availability and improve the quality of special education and related services.

The following abstracts summarize the studies supported since 1976 under the special studies authority. A table summarizing the funding history of the program is included.

FY 1976: Initial Studies

P.L. 94-142 was enacted late in 1975 and was to become effective two years later, in school year 1977-78. The first research funds became available in the summer of 1976, a year when not only the federal agency but also state and local agencies were gearing up to begin implementation. Because the provisions of the Act were not yet mandatory, it made little sense to study practices. Preliminary work was needed, however.

For two reasons, attention was directed first to answering the question, "Are the intended beneficiaries being served?". First, Congress had specified in the Act that the Commissioner should validate the states' count of handicapped children; and second, the target of the Act was such a diverse population. This question seemed especially difficult to answer. Four major studies were designed to illuminate the relevant parameters involved in answering the question.

Study 1. Assessing State Information Capabilities. The purpose of this study was to determine the states' capacities to respond to the new reporting requirements inherent in P.L. 94-142. The study was conducted by Management Analysis Center (MAC), which analyzed the data requirements in the law and the reporting forms being developed by SEP, and visited 27 states to test their capacity to respond. MAC reported on state capacity to provide information on four categories: children, personnel, facilities, and resources. They found capacity was relatively high on the first category and decreased across the remaining categories. They recommended deleting requirements for fiscal data, since states could not adequately respond to such requests.

Study 2. Development of a Procedure for Validating State Child Count Data. The purpose of this study was to develop a sampling plan and a method that could be used by SEP to validate the state counts. The work was performed by SRI International. SRI evaluated all previously available data on the incidence of handicapped children and concluded that the data reported by states were at least as accurate as other data sources, if not more so. Regarding a procedure for validating the information, SRI concluded that these procedures should be incorporated into the counting procedures themselves. SRI developed a handbook for states on how to do this.

Study 3. Analysis of State Definitions of Handicapping Conditions. The purpose of this study was to determine the extent to which state policies either (a) provided for services to children with disabilities other than those provided for under P.L. 94-142, or (b) used varying definitions or eligibility criteria for the same categories of children. The work was performed by the Council for Exceptional Children (CEC), which found that neither the types of children served nor the definitions varied widely. However, there were some instances in which eligibility criteria did vary.

Study 4. Implementation of Individualized Education Programs. The purpose of this study was to estimate the difficulty of implementing this particular provision of the Act. The work was performed by Nero and Associates and by internal staff. Four states were visited and a variety of individuals affected by the Act were interviewed. The study revealed that (a) similar concerns were identified both in states that already had provisions and in those that did not, and (b) similar concerns were raised by both special education and regular teachers. The findings were used to design technical assistance and inservice training programs.

FY 1977

While the FY 1976 studies were heavily concerned with state data, the FY 1977 studies began moving towards studies of practices. Studies initiated during FY 1977 would be conducted during FY 1978, the first year in which the Act took effect.

Study 1. Analysis of State Data. The purpose of this study was to analyze data already available from the states. The work was performed by TEAM Associates and by internal staff. The state data contain all numerical information required in the Act as well as extensive information on policies and procedures. Analysis of the information contained in these state documents, as well as information obtained from special studies, forms the backbone of the Annual Report to Congress.

Study 2. Longitudinal Study of the Impact of P.L. 94-142. The purpose of this study was to follow a small sample of school systems over a five-year period to observe their progress in implementing the Act. Because Congress asked that the annual report describe progress in implementation, this in-depth study of processes was designed to complement the national trends reported by states. The work was performed by SRI International. The study describes the implementation process for the school districts and identifies problematic areas.

Study 3. Criteria for Quality. This study was designed to lay the groundwork for future studies of the quality and effectiveness of P.L. 94-142's implementation. It was conducted by internal staff with the assistance of Thomas Buffington and Associates. The study focused on four principal requirements of the law: provision of due process, least restrictive placements, individualized education programs, and prevention of erroneous classification. The study solicited 15 position papers on evaluation approaches for each requirement for local educational agency self-study guides. Four monographs addressing the evaluation of these four provisions of the law were produced. Each monograph includes the relevant papers and a review by a panel of education practitioners. The monographs are now available on a cost recovery basis from Research for Better Schools, Inc., Philadelphia, Pennsylvania.

Study 4. A National Survey of Individualized Education Programs. The purpose of this study was to determine the nature and quality of the individualized education programs being designed for handicapped children. These programs are at the heart of the service delivery system, and the Congress asked for a survey of them. The work was contracted to Research Triangle Institute (RTI). RTI spent the 1977-78 school year designing a sampling plan and information gathering techniques. Data collected in school year 1978-79 provided descriptive information about what IEP documents are like. The study found that 95 percent of handicapped children have IEPs. Most IEPs meet minimal requirements of the Act, except for the evaluation component.

Study 5. A Descriptive Study of Teacher Concerns. The purpose of this study was to assess the array of concerns raised by teachers regarding the effects of the Act on their professional responsibilities. Several concerns were raised by teachers during the course of the FY 1976 study on individualized education programs and several have been raised by national teachers' organizations. Roy Littlejohn and Associates performed the work. They organized the concerns into general types and analyzed the relationships between these categories of concerns and the requirements of the Act. They visited six school districts to analyze in detail a small number of examples. Recommendations were made for school districts to provide teachers with more information about P.L. 94-142.

Study 6. Case Study of the Implementation of P.L. 94-142. The purpose of this study was to assess the first year of implementation of the Act. The work was performed by Education Turnkey Systems. Nine local school systems were observed during the 1977-78 school year and the first half of the 1978-79 school year to determine how priorities were established and how implementation decisions were made at each level of the administrative hierarchy. P.L. 94-142's implementation was observed to be well underway at each local education agency despite varying levels of resources and organizational differences between sites. Problem areas were identified, but no changes in the Act were recommended.

FY 1978

Whereas the FY 1977 studies were designed to capture general information on practices and progress in implementation, the studies undertaken during FY 1978 were more clearly focused on particular issues.

Study 1. Study for Determining the Least Restrictive Environment Placement of Handicapped Children. The purpose of this 18-month study was to investigate the rules or criteria used by the courts and state hearing officers to determine the placements of handicapped children, the guidance given by states to school districts in making placement decisions, and the actual placement procedures used by school districts. Placement decision rules and interpretations of Part B of The Education of the Handicapped Act's least restrictive environment requirement were compared across arenas. Exemplary practices at the state and local education agency levels were described.

Study 2. Special Teens and Parents Study. This case study was originally intended to continue for five years but, because of a cutback in special studies money, was terminated at the end of the second year. The study examined the impact of P.L. 94-142 on secondary learning disabled students and their families. For four requirements of the law--protection in evaluation, individualized education programs, least restrictive environment, and procedural safeguards--the study investigated how the requirements were implemented by the secondary school special education program, the impact of the school program and practices on the students, and the implications of the experiences of the students for those concerned with the education of learning disabled adolescents.

Study 3. Study of Activist Parents and Their Disabled Children. This case study was originally intended to continue for five years but, because of a cutback in special studies money, was terminated at the end of the second year. The study focused on parents who responded energetically to the invitation to activism offered by P.L. 94-142 and examined the benefits of parent activism for the child. Effective strategies were identified and the history of their development described. The cost of parental involvement was described in emotional and economic terms, and program benefits to the child were shown.

Study 4. Study of the Quality of Educational Services Provided to Handicapped Children. This case study was originally intended to continue for five years but, because of a cutback in special studies money, was terminated at the end of the second year. The study examined the extent to which school district implementation of P.L. 94-142 results in quality educational services to the handicapped child and the consequences to the child and family. The first year focused on entry into special education during the preschool years, the emotional consequences of the diagnostic process, parental education about P.L. 94-142, and early programming for preschoolers. The second year focused on factors that influence mutual adaptation between families and school staff.

Study 5. Impact of P.L. 94-142 on Children with Different Handicapping Conditions. This case study was originally intended to continue for five years but, because of a cutback in special studies money, was terminated at the end of the second year. It focused on differences in the impact of P.L. 94-142 implementation on children with various handicapping conditions and their families. The study looked at the consequences to families from five theoretical perspectives and related these to the provisions and implementation of the Act.

Study 6. P.L. 94-142: Institutional Responses and Consequences. This case study was originally intended to continue for five years but, because of a cutback in special studies money, was terminated at the end of the second year. The study investigated the relationship of school district responses to P.L. 94-142 to handicapped child and family outcomes, such as self-concept, social skills and competencies, academic achievement, and economic activity.

Study 7. Technical Assistance in Data Analysis. The purpose of this project is to analyze data already available from states. The work is being performed by Decision Resources and by internal staff. State data available to SEP annually contain all numerical information required in the Act as well as extensive information on policies and procedures. Analysis of the state data is conducted throughout the year for dissemination to the field and for inclusion in the Annual Report to Congress.

Study 8. Identification of Future Trends in the Provision of Services to Handicapped Students. This project was designed to provide information on potential future changes in the areas of values, economics, social institutions, technology, and medicine that may affect the provision of services to handicapped children. In 1978, Newtek Corporation held a conference with experts in the five areas who discussed the trends in their areas and the implications of those trends for the handicapped with panel members representing various aspects of services to the handicapped. Although in many cases the projected trends were too speculative to guide policymaking, the conference highlighted some potentially important trends that policymakers should be aware of. A summary of the conference was published in Focus on Exceptional Children.

Study 9. A Project to Develop BEH Waiver Requirements, Procedures, and Criteria. States that provide clear and convincing evidence that all handicapped children have a free appropriate public education available to them may receive a partial waiver of the law's fiscal nonsupplant requirement. A six-month study was undertaken by Planning and Human Resources in 1978 to develop guidelines to be used by SEP, then the Bureau of Education for the Handicapped, in reviewing a state's request for a waiver. The guidelines were developed based on an evaluation of the Office's experiences in conducting a review of a request by Massachusetts for a waiver in 1978; on information provided by federal, state, and local agencies as well as state consumer, advocacy, and professional associations; and a review of monitoring procedures used by other federal agencies.

FY 1979

The studies undertaken in FY 1979 were focused on particular issues in the implementation of P.L. 94-142. Increasingly, there was examination of the extent to which the purposes of the Act were being met.

Study 1. A Study to Evaluate Procedures Undertaken to Prevent Erroneous Classification of Handicapped Children. This study is focused on describing assessment practices used by local school systems to identify and classify handicapped students and to determine their educational placements and on examining the soundness of those practices. The contractor, Applied Management Sciences, has collected data from 500 school buildings in 100 school districts and reviewed selected documents for 10,000 individual students. Five topics have been identified for reporting: (a) the extent to which local educational agencies are using evaluative data such as adaptive behavior and classroom observations in their assessments; (b) a comparison of evaluation procedures for minority and nonminority students; (c) training needs in the area of assessment as identified by the respondents; (d) the extent to which school staff members document their evaluation decisions; and (e) the extent to which school systems have students waiting to be evaluated.

Study 2. Survey of Special Education and Related Services. The purpose of this study was to survey and describe the services provided by school districts and the number and nature of services actually received by handicapped children. As a result of cutbacks in special studies monies, this contract was terminated at the end of the first year.

Study 3. Study of Special Education Student Turnover. Little is known about student flow between special and regular education. The purpose of this study is to (1) describe the characteristics of children leaving special education and the reasons for their departure, (2) identify the extent to which handicapped children transfer successfully into regular education programs, and (3) identify children who may receive treatment of short duration and therefore may not be receiving services when federal counts are taken.

Study 4. Legal Conference on the Surrogate Parent Requirement. This project investigated the legal issues surrounding P.L. 94-142's surrogate parent requirement and explored as many approaches as possible for responding to these issues. The Federation for Children with Special Needs held a conference in July 1979, which included a person from each of four states involved in the legal aspects of implementing the parent surrogate requirements, two persons from national organizations, and representatives from the General Counsel's Office of HEW, the Justice Department, and SEP. Information provided at this conference, information reported by several states on their experience in implementing the parent surrogate requirement, and independent legal research were used as a basis for analyzing the issues involved. The analysis was used to review the need for policy clarification.

Study 5. Analysis of State and Local Implementation Efforts. This study was designed to provide information on the budgetary factors at the state and local levels that affect the implementation of P.L. 94-142. The study, conducted by Newtek Corporation from June through September 1978, investigated the special education budgetary process at the state level, and examined in detail budgetary processes in four local education agencies selected on the basis of demography. A guidebook was produced describing the federal funding process for P.L. 94-142 as well as state and local special education funding processes.

Study 6. State and Local Communication Forum for Promoting and Exploring Issues Related to P.L. 94-142. The Forum project, which is being conducted by the National Association of State Directors of Special Education, provides avenues of communication between local, state, and federal levels. Eighteen state educational agencies and approximately 120 local educational agencies are Forum participants. These agencies are sampled to obtain information on emerging issues in special education and on the implementation of P.L. 94-142. The information obtained is disseminated by such means as newsletters and reports to state and local educational agencies, to other agencies and organizations interested in the education of handicapped children, and to the general public and is used in reporting to Congress on the implementation of the law. The project also provides technical assistance to state and local educational agencies by responding to the issues and needs they have identified.

Study 7. State and Local Education Agency Technical Assistance Training. In response to needs identified by state and local educational agencies for information in specific areas of implementation of P.L. 94-142, SEP funded Tristar (a cooperative organization of the North Carolina Department of Public Instruction, the University of North Carolina, and the Wake County Public Schools) in FY 1980 and FY 1981. During its first year, Tristar conducted two conferences for state and local educational agencies and the Regional Resource Centers on problems and successful practices in the following areas: child count, child find, individualized education programs, and interagency cooperation. The contractor then provided follow-up technical assistance to participants who requested it. In its second year, Tristar focused on providing information to educational agencies on how to reduce adversarial relationships between parents and schools. Technical assistance materials were developed by the project, other resources were identified, and a national topical conference was conducted in June 1980.

Study 8. Verification of Procedures to Serve Handicapped Students. This study, conducted by Applied Management Sciences, has two components--an Assessment component and a Secondary component. The Assessment component investigated three processes that influence the timeliness with which a school system conducts evaluations for students who have been identified as potentially handicapped--referral screening, case coordination, and quality control. This component of the study was conducted in the school districts of three moderately-sized cities. A total of 94 personnel involved in various ways with the evaluation process participated in the study. The Secondary component was conducted in two phases. The first phase examined the class schedules of 458 handicapped students in 11 public high schools in two states for information concerning the number and type of handicapped students who received services, the type of coursework the students took, the extent to which they received services in integrated settings, and the extent to which they received services comparable to those of nonhandicapped students. The second phase of the study involved the identification and documentation of promising strategies for serving secondary handicapped students. Strategies were grouped into the following topics: personnel utilization, special education curriculum development, internal special education strategies, regular education teacher preparation/support, special education student preparation/support, and vocational options.

FY 1980

There were no new special studies funded in FY 1980 because the funding for evaluation activities was reduced by 57 percent. Six special studies were prematurely terminated because of this reduction in funding. The following six studies were continued:

- State/Local Communication Forum,
- Longitudinal Study of the Impact of P.L. 94-142,
- Verification of Procedures to Serve Handicapped Children,
- A Study to Evaluate Procedures Undertaken to Prevent Erroneous Classification of Handicapped Children,
- SEA/LEA Technical Assistance Training on Implementing P.L. 94-142, and
- Project to Provide Technical Assistance in Data Analysis.

Though the substantive focus and purpose of the studies did not change in FY 1980, increased emphasis was given to preparing reports that would provide state and local educational agencies with information which would enable them to improve their existing procedures and practices for educating all handicapped children.

FY 1981

Funding for special studies was again cut in FY 1981--to half the FY 1980 level. The following four studies were continued:

- State/Local Communication Forum,
- Longitudinal Study of the Impact of P.L. 94-142 (funded with FY 1980 monies),
- A Study to Evaluate Procedures Undertaken to Prevent Erroneous Classification of Handicapped Children, and
- Project to Provide Technical Assistance in Data Analysis.

FY 1982

In FY 1982 two studies were funded:

- State/Local Communication Forum, and
- Project to Provide Technical Assistance in Data Analysis.

Special Studies Contracts

Title	Contractor and Contract Number	Contract Period and Amount
Assessment of State Information Capabilities under P.L. 94-142	MAC Inc. Cambridge, Mass. 300-76-0562	9/30/76 - 9/30/77 $298,840
Development of a Sampling Procedure for Validating State Counts of Handicapped Children	SRI International Menlo Park, Calif. 300-76-0513	10/1/76 - 9/30/77 $267,790
An Analysis of Categorical Definitions, Diagnostic Methods, Diagnostic Criteria, and Personnel Utilization in the Classification of Handicapped Children	Council for Exceptional Children Reston, Va. 300-76-0515	10/1/76 - 9/30/77 $110,904
Implementation of the Individual Education Program	David Nero & Associates Portland, Or. 300-74-7915	9/30/76 - 12/30/77 $433,000

---

* THE FIGURES REPRESENT THE AMOUNT OF FUNDS THAT NEW MEXICO WOULD HAVE RECEIVED IF IT CHOSE TO PARTICIPATE IN THE P.L. 94-142 PROGRAM. SINCE NEW MEXICO HAS CHOSEN NOT TO PARTICIPATE, THE FUNDS IT WAS ELIGIBLE TO RECEIVE HAVE BEEN DISTRIBUTED ON A PRO RATA BASIS TO THE OTHER STATES. THIS END OF YEAR DISTRIBUTION IS NOT REFLECTED IN THE ABOVE FIGURES

Appendix Notes

Source: FY 1981 State End-of-Year Reports. A dash generally indicates that the data were not available for the state.

Appendix 3

Table A, 1980-81

1. Arizona — The state reported a combined count of teachers of the deaf-blind and multihandicapped; the data were presented under the category of multihandicapped. Teachers of the speech impaired were classified as speech pathologists; teachers of the other health impaired were classified as home/hospital teachers.
2. Illinois — The total number of teachers includes 1,403 cross-categorical and early childhood teachers. Also, speech pathologists were counted by the state as teachers of the speech impaired.
3. Kansas — The state counts of teachers of the speech impaired were included under speech pathologists. Also, the total number of teachers included teachers of noncategorized handicapped children. The state's count of teachers of the orthopedically impaired and other health impaired included home/hospital teachers.
4. Kentucky — The state combined counts of teachers of the deaf-blind with teachers of the hard of hearing and deaf; the counts were reported under hard of hearing and deaf. Teachers of the other health impaired were included under the orthopedically impaired category and under home/hospital teachers. The total count included consultant teachers which the state did not report categorically.
5. Louisiana — The total state count of teachers of the mentally retarded included noncategorized preschool teachers.
6. Michigan — Speech pathologists and audiologists were included in the state count of teachers of the speech impaired. The state combined counts for teachers of

the orthopedically impaired and other health impaired; the data were presented under the orthopedically impaired category.

7. New Jersey — The state did not report itinerant/consulting teachers by handicapping category so the total number of teachers included 1,360 noncategorized teachers.

8. Puerto Rico — The commonwealth did not report the number of itinerant/consulting teachers by handicapping category so the total number of teachers included 50 noncategorized teachers.

9. Texas — Speech therapists/pathologists (2040.6) were included in the state count of teachers of the speech impaired. The state count of teachers of the other health impaired included teachers of the autistic.

10. Utah — The state did not report the number of resource room teachers by handicapping category so the total number of teachers includes 934.94 noncategorized teachers.

11. Virginia — The state included preschool teachers in the total count of teachers; no breakdowns of these teachers by handicapping condition was provided.

12. West Virginia — The state included preschool teachers in the total count of teachers; no breakdowns of these teachers by handicapping condition was provided. The count of teachers of the speech impaired included speech pathologists.

13. American Samoa — The territory did not report itinerant/consulting teachers by handicapping category so the total number of teachers included one noncategorized teacher.

Table B, 1980-81

1. Arizona — The state classified teachers of the speech impaired as speech pathologists; teachers of the other health impaired were classified as home/hospital teachers.

2. Florida — The state did not report counts of home/hospital teachers or speech pathologists since they were part of the regular instructional program in the state.

3. Illinois — The total number of school staff included counts of art therapists, driver education teachers, home economics teachers, interpreters for the deaf, music therapists, orientation mobility specialists, reader-braille-typists, school nurses, school nurse interns, and other instructional staff. Also, the state included speech pathologists under the count of speech-impaired teachers.

4. Kansas — The state count of speech-impaired teachers was included under speech pathologists.

5. Kentucky — The state count of home/hospital teachers included some teachers of the other health impaired. The total count of school staff included personnel (98.15) reported as "other staff" under P.L. 89-313.

6. Michigan — Speech pathologists and audiologists were included in the state count of teachers of the speech impaired.

7. North Carolina — The state counts of school social workers, vocational education teachers, physical education teachers, work study coordinators, and recreation therapists provided services to both handicapped and nonhandicapped students.

8. Rhode Island — The state combined counts of diagnostic staff and physical therapists with counts of other staff, but no breakdown was provided.

9. Texas — The state included speech therapists/pathologists in the count of teachers of the speech impaired.

10. West Virginia — The state count of speech pathologists was included in the count of teachers of the speech impaired.

Appendix 4

Tables A-H, 1980-81

1. California — The state reported counts of multihandicapped students in other handicapping categories; these categories were not specified by the state.

2. Florida — Florida categorized students by their major handicap so no multihandicapped counts were reported. The state indicated that most hard-of-hearing students were included in the speech-impaired category.

3. Hawaii — The state reported a combined count of orthopedically impaired and other health impaired; the data were reported under the category of orthopedically impaired.

4. Kansas — The state combined the counts of orthopedically impaired children and other-health-impaired children; the data were presented under the category of orthopedically impaired. Also, the state combined the counts of deaf-blind children and multihandicapped children; the data were reported under the category of deaf-blind children.

5. Kentucky — The state combined the counts of hard of hearing and deaf and deaf-blind; the data were presented under the category hard of hearing and deaf.

6. Ohio — The state reported a combined count of orthopedically impaired and other health impaired; the data were reported under the category of orthopedically impaired. Also, the state reported a combined count of deaf-blind and multihandicapped; the data were reported under the category of multihandicapped.

7. Pennsylvania — The state count of learning disabled 18-to-21 year olds served in separate school facilities included brain-damaged students.

8. West Virginia — The noncategorical placement category was used by the state primarily to report the preschool handicapped.

9. Wisconsin — The noncategorical placements reported were described by the state as "early childhood generic." Children served under P.L. 89-313 in state-operated and state-supported programs were not included in the state's counts.
